For the EU:

In the RIS index encoding guide 2.x, for G.3.12. Mooring facility indicated that an ISRS location code can be recorded. This is not possible within the Inland ENC FC and IENC encoding guide 2.4.1.

What are we going to do here?

Bernd

Dear René,

in Austria we are providing ISRS location codes for berths, but not for individual mooring facilities. I do not know who requested morfac for the RIS Index. Maybe we should ask at the next meeting of the JTF RIS Index whether morfac is really necessary. If nobody is assigning ISRS location codes to mooring facilities we could delete it in the RIS Index encoding guide. If someone insists that ISRS location codes are necessary for morfac, we should draw up a CR to add unlocd to morfac.

Best regards

Bernd
