

SCAMIN attribute for HULKES (FC) should be removed

General Discussions

The HULKES object is specified in the Product Specification as being a Group 1 object. The IENC 2.4 Feature Catalogue however incorrectly includes the SCAMIN attribute for HULKES. This should be removed, as Group 1 objects do not have a SCAMIN. (It should be retained for Inland 'hulkes').

Dear René,

this is indeed an error. The Encoding Guide is already correct and is not listing SCAMIN for HULKES, but the Feature Catalogue is containing SCAMIN. Are you going to submit a formal Change Request for Edition 2.5 respectively S-401?

Best regards

Bernd

An additional remark/correction: HULKES will no longer be Group I in S-101. The correction would therefore only apply to an Edition 2.5, not to S-401.

Best regards

Bernd
