

# **Proposal reinstating STATUS value 4 (“not in use”) for CBLSUB**

## **General Discussions**

**ReneVisser**

Mar 3

The STATUS value 4 (“not in use”) has been removed from CBLSUB. In the view of RWS this is potentially relevant navigational information, albeit in a rare case. If a ship has to anchor in an emergency, it is preferable to anchor in the vicinity of a disused cable rather than in the vicinity of a cable or pipeline in use. (Of course it is preferable to avoid cables altogether, but this may not always be possible.)

We use this value and propose reinstating it in the standaard.

BR René

Dear René,

could you submit a formal Change Request to amend the FC, the EG and the Recommended Validation Checks, please?

The Change Request will only affect an edition 2.5 because we have already decided to include all S-101 Attributes in S-401.

Best regards

Bernd
